

EQUIPMENTS FOR WATER TREATMENT

Design, manufacture and installation

The company C.M.C is specialized in the following activities in France and abroad :

↳ **Manufacture of equipments for wastewater and drinking water treatment**

↳ **Boilerwork**

↳ **Locksmith - Metalworking**

Thanks to our **Design department** equipped with Solidworks and Autocad, we offer equipments adapted to our customers needs.

Wastewater treatment

- Curved and straight screener
- Oil separator, sand separator
- Aeroflotator
- Settling basin
- Sprinkler
- Aeration brush
- Slow and fixed turbine
- Slow and floating turbine
- Diametrical and radial scraper bridge
- Diametrical and radial suction bridge
- Alternating scraper bridge
- Central drive scraper bridge
- Thickener
- Sludge treatment

Biological wastewater treatment « BIONYL »

This process offers suitable solution to treat wastewater for small and mid-size installations from 50 to 3000 p/e.

The BIONYL process is composed of primary treatment, activation BIONYL, lamellar settling basin, sludges storage tank.

↳ **The advantages of this process :**

- Low energy consumption
- Easy to use and not much maintenance
- Small surface area
- Easy environment integration
- Odourless
- Robustness

Drinking water treatment

- Sand filter
- Active carbon filter
- Aeroflotator
- settling basin
- Tour for iron removal
- Pipes in steel, stainless steel, PEHD, solderable, PVC
